

Backend / Full stack Engineer

We are an early stage product start-up, building highly scalable enterprise class software. We primarily work in technologies like Scala, Akka, React, Redux, ES6

Job Description

We are not a project company that looks for specific skill sets/knowledge. We always work on cutting edge technologies and so finding people with a specific skill set is not in our plan. We want people that can learn fast and go really deep into a technology if required.

We are looking for candidates (2 to 5 years' experience in Backend / fullstack) with good fundamentals in Computer Science, Good Programming Skills.

The following would be an added advantage

- Scala, Java, Python, Golang
- TDD, Design Patterns
- Algorithms, Data Structures, Problem Solving
- Django, Flask, Play, Akka
- Amazon Web Services or Google Cloud Platform
- Experience with at least one SQL based database and one NoSQL based database.

People selected would get to work with some of the most experienced software architects in the Indian IT industry. The learning opportunities are plentiful for people with the right attitude. We have a great work culture and a fun environment. We are good paymasters in the Cochin area.

Please note that the interview would roughly span around 3 hours and would be around General Programming Skills, Problem Solving, Data Structures & Algorithms, Database concepts and on your previous experience & skills.
